(54) MUFFLE PAINTING METHOD OF PAVEMENT SHEET

(57) Abstract:

PROBLEM TO BE SOLVED: To provide a muffle painting method of a water permeable pavement sheet, without separation/deformation of a pattern, by simplifying construction.

SOLUTION: This pavement sheet is composed of at least a pattern layer and a thermoplastic resin layer, and is placed on a pavement by contacting the thermoplastic resin layer side with the pavement. The pat-

tern layer is fixed to a pavement surface by heating and melting the thermoplastic resin layer. A pattern layer surface is coated with a transparent resin layer after fixing the pattern layer to the pavement surface. A primer layer is arranged in advance on the pavement surface for placing the pavement sheet. A heating melting method of the pavement sheet is characterized by being composed of at least one of spraying of steam, spraying of a flame and heat in asphalt construction.
